

ATCHAYA VIJAYAKUMAR

MERN Stack Developer

✉ atchayakumar0307@gmail.com ☎ +91 8870880307 📍 Chennai

👤 OBJECTIVE

Detail-oriented and proactive MERN Stack Developer with 3+ years of experience building scalable web applications using **React.js**, **Node.js**, **Express.js**, and **MongoDB**. Skilled in developing secure **RESTful APIs**, creating **responsive web designs**, and managing **database operations** to ensure performance and reliability. Seeking a challenging role where I can apply my full-stack expertise to deliver impactful software solutions and grow as part of a collaborative development team.

🧠 TECHNICAL SKILLS

SKILLS

Frontend Development

- **Web Technologies:** HTML5, CSS3, JavaScript (ES6+), JSON
- **Frameworks & Libraries:** React.js, React Router, Material-UI, Styled Components

Backend & Databases

- **Server-side:** Node.js, Express.js
- **Database:** MongoDB
- **APIs:** RESTful API design and integration

Development Tools

- Visual Studio Code, Postman

Version Control & Collaboration

- Git, GitHub, Bitbucket, Jira, ClickUp

Methodologies

- Agile (Scrum), CI/CD with GitHub Actions

📁 PROFESSIONAL EXPERIENCE

ITROPE TECHNOLOGIES PRIVATE LIMITED,

05/2022 – Present | Chennai, India

Software Engineer

- Developed and maintained full-stack features for enterprise-level web applications using the **MERN stack**, focusing on scalable architecture and clean code practices.
- Built responsive, cross-browser-compatible UI components with **React.js**, **TypeScript**, and **Material-UI**, ensuring accessible and mobile-first designs.
- Integrated complex APIs and handled state management using **Redux Toolkit**, **React Query**, and **Axios** to ensure efficient and consistent client-server communication.
- Designed and implemented secure, modular **RESTful APIs** using **Node.js** and **Express.js**, following best practices for authentication, error handling, and routing.
- Managed data flow and business logic using **MongoDB**, including schema design, aggregation pipelines, and performance optimization.

PROJECTS

1. Healthcare Information System (HIS)

Role: Full Stack Developer

Stack: React.js, Material-UI, Node.js, Express.js, MongoDB, Figma, GitHub Actions

Highlights & Responsibilities:

- Developed responsive, reusable UI components using **React.js** and **Material-UI**, enabling consistent user experiences across desktop and mobile for clinical workflows such as patient management, appointment scheduling, and reporting.
- Built and integrated **RESTful APIs** with **Node.js** and **Express.js**, enabling secure and scalable CRUD operations for modules like Registration, Visits, Reports, and Master Data Management.
- Designed and managed **MongoDB collections** with efficient schema structures using **Mongoose**, including embedded documents and indexing for optimized query performance across patient and appointment data.
- Collaborated in **Agile Scrum teams**, participating in daily stand-ups, sprint planning, and retrospectives while coordinating with testers and product stakeholders to deliver compliant, user-centric healthcare features.
- Maintained code quality with **ESLint**, **Prettier**, and **unit tests**, and configured **GitHub Actions** for CI/CD to automate build, test, and deployment processes across frontend and backend.
- Translated wireframes and mockups from **Figma** into pixel-perfect React components, enhancing UI/UX with improvements to layout, form handling, and error feedback, tailored for clinical usability standards.

2. eKYC Platform

Role: Full Stack Developer

Stack: React.js, TypeScript, Material-UI, React Router, Redux Toolkit, React Query, Axios, Node.js, Express.js, MongoDB, ClickUp, Bitbucket

Overview: Built a full-featured **electronic Know Your Customer (eKYC)** platform using a modular, component-driven architecture. Combined a responsive React frontend with secure, scalable backend services for identity verification workflows.

Highlights & Responsibilities:

- Developed dynamic, **multi-step onboarding flows** using **React Router** and **Redux Toolkit**, allowing smooth transitions between document upload, face verification, and user data capture stages.
- Built a custom **document upload component** with real-time validation and integrated backend **OCR processing APIs**, with data persisted in **MongoDB**.
- Implemented **live face verification** using the **MediaDevices API** on the frontend and integrated a face-matching microservice via a **Node.js/Express** backend.
- Designed an **admin dashboard** for tracking user onboarding status, utilizing **React Query** for efficient data fetching and cache management.
- Ensured robust **form validation** using **React Hook Form** combined with **Yup**, enforcing schema-based validation across multiple steps.
- Collaborated within **Agile workflows using ClickUp**, and maintained source code and branches via **Bitbucket**, following Git best practices.

EDUCATION

- B.Tech – Electronics & Communication Engineering at Anna University (2019-2023) with **CGPA 8.3**.
