📄 SUMMARY

Results-driven Software Engineer with 3 years of experience in full-stack development, enterprise ERP systems, and AI-powered automation. Proven success building scalable CRM and ERP platforms that streamline operations for 65+ internal users. Specialized in JavaScript, Node.js, React, and PostgreSQL, with hands-on expertise in predictive maintenance systems and document automation using LLM technologies. Built and scaled CRM systems handling 4,900+ leads, transforming manual workflows into data-driven software solutions that reduce operational overhead by 40% and improve cross-functional efficiency.

⚙️ TECHNICAL SKILLS

• React *ADVANCED*

• javascript *ADVANCED*

• Nodejs *EXPERT*

• sql *EXPERT*

• db *EXPERT*

• Python *ADVANCED*

• Java *EXPERT*

• Angular *EXPERT*

🏢 WORK EXPERIENCE

developer

Petrokens Engineering and Services Pvt Ltd

ProjectEPC – Enterprise ERP Platform (Production)

Tech: React.js, Node.js, Express.js, PostgreSQL, REST APIs, JWT, RBAC, Tailwind CSS

Overview: Enterprise ERP system centralizing operations, automating workflows, and enabling real-time reporting for **65+ users**, reducing bottlenecks by **45%**.

Roles & Responsibilities:

- Developed core ERP modules: **CRM, Project Management, Timesheets, HRMS, Role-based Dashboards, and Proposal System**
- Architected and deployed a company-wide ERP platform for **65+ users**, reducing operational bottlenecks by **45%**
- Designed scalable backend with **130+ PostgreSQL tables** and **500+ REST APIs**, enabling real-time cross-department data flow

- Optimized database performance, eliminating **60% data redundancy** and improving reporting speed 3x.
- Implemented secure **RBAC with audit logging**, achieving zero unauthorized access incidents
- Automated document workflows and approval processes, reducing manual inter-department coordination

2. AI-Powered Pump Predictive Maintenance System (In Development)

- Developing an ML-based predictive maintenance system analyzing vibration, temperature, and pressure data
- Processing 10,000+ daily sensor readings using anomaly detection and time-series models
- Performing feature engineering and data preprocessing for fault pattern identification
- Building alert mechanisms to support proactive maintenance and reduce unplanned downtime

• 3. AI Document Intelligence for QA/QC (R&D Prototype)

- Building LLM-powered system to analyze and summarize 100+ page engineering documents
- Implementing chunking, embeddings, and vector retrieval for semantic document search
- Designing contextual memory pipelines for accurate long-document understanding
- Developing AI workflows for automated QA/QC document review and insight extraction

Software developer Urbancode

Zen CRM – Training & Operations Management Platform

Tech: React.js, Node.js, Express.js, PostgreSQL, Tailwind CSS, Material UI, Axios, JWT, Linode

Overview: Enterprise CRM system for managing student lifecycle, training operations, payments, and internal workflows with RBAC, automation, and analytics.

Roles & Responsibilities:

- Architected an enterprise-grade CRM platform managing the complete student lifecycle and processing **4,900+ leads**
- Developed **70+ secure REST APIs** using Node.js and Express.js with JWT authentication and Role-Based Access Control (RBAC), achieving response times under **200ms**
- Designed a structured **12-stage workflow system** (Enquiry, Enrolled, On-Hold, Archived, etc.) with real-time dashboards and status tracking
- Built multi-step lead forms, dynamic filtering features, and a **Quill.js-based internal commenting system**
- Integrated automated communication workflows including brochure sharing, follow-ups, and class reminders using Google Mail API and scheduled scripts

- Developed modules for course, batch, and trainer management with full CRUD functionality and relational data linking
- Implemented operational features such as bulk lead uploads, fee reminders, and **Payment Insights dashboards** for financial tracking
- Managed end-to-end system delivery including responsive frontend development with Tailwind CSS, backend architecture, PostgreSQL schema design, and **Linode** cloud deployment

EDUCATION

Kings Engineering College | CGPA - 8.5
B.E. in Computer Science Engineering,

2021 – 2025

GPA: 8.5

PROJECTS

Zen CRM – Training & Operations Management Platform
Software developer

Roles & Responsibilities:

- Architected an enterprise-grade CRM platform managing the complete student lifecycle and processing 4,900+ leads
- Developed 70+ secure REST APIs using Node.js and Express.js with JWT authentication and Role Based Access Control (RBAC), achieving response times under 200ms
- Designed a structured 12-stage workflow system (Enquiry, Enrolled, On-Hold, Archived, etc.) with real-time dashboards and status tracking
- Built multi-step lead forms, dynamic filtering features, and a Quill.js-based internal commenting system • Integrated automated communication workflows including brochure sharing, follow-ups, and class reminders using Google Mail API and scheduled scripts • Developed modules for course, batch, and trainer management with full CRUD functionality and relational data linking • Implemented operational features such as bulk lead uploads, fee reminders, and Payment Insights dashboards for financial tracking • Managed end-to-end system delivery including responsive frontend development with Tailwind CSS, backend architecture, PostgreSQL schema design, and Linode cloud deployment

INTERESTS

Trained 50+ students in MERN stack, Python, and Java through mentoring and technical training • Built 3+ production LMS and CRM platforms for real-world organizations • Delivered 5+ client websites, improving their digital presence and online reach • Developed enterprise ERP modules supporting operations for 65+ users
